

ABS Compliance Management

with the new OSIRIS Nagoya
Module

presented by Julia Koblitz

What is OSIRIS anyway?

OSIRIS is a research information system

- ➡ It is used by research institutes to
collect, manage, and analyse
their research

👉 osiris-app.de

Key Aspects

Open Source & Open Science

OSIRIS is fully open source (MIT license), without vendor lock-in, hidden costs, and actively developed by the community.

Easy to use

Intuitive interfaces, clear structure, and a strong focus on UX: OSIRIS works without technical background knowledge.

Flexible & customizable

Fields, activities, workflows, roles and reports can be configured freely – directly in the UI, without coding.

Fast to deploy

OSIRIS can be installed within a few hours – locally, on your server, or via our hosting.

Built for research

Developed by researchers, tested in real workflows, and tailored to the needs of non-university institutes.

Expandable & Open

The OSIRIS API allows easy integration with external tools, databases and reporting processes.

Why ABS Compliance in OSIRIS?

Because we have everything what we need already!

Our Personas for today: Meet Lisa and Daniel

Lisa

Scientist and Project Lead

Daniel

ABS Compliance Officer

The process of an ABS-relevant project in OSIRIS

It starts with a project proposal, where **Lisa** adds among other details:

Nagoya Protocol

Do you plan to collect, obtain or utilise genetic resources (biological samples) from outside of Germany over the course of this project?

Yes No

Please list all countries:

Mexico × El Salvador × Ecuador ×

Please select a country

Lisa

A new „Nagoya Protocol“ Tab appears

Proposal Documents 0 **Nagoya Protocol**

A new project proposal with Nagoya protocol compliance has been created: **Lisas Proposal**

 View

Daniel

He can now review all countries entered by Lisa

Nagoya Evaluation

Current Status:

Country review pending

COUNTRY	PARTY TO NAGOYA?	OWN ABS MEASURES?	COMMENT	DECISION
Mexico	Unknown	Unknown		ABS unknown
El Salvador	Unknown	Unknown		ABS unknown
Ecuador	Unknown	Unknown		ABS unknown
Overall rationale / comments				 Daniel
 Save review				

Based on his decision, countries get flagged

Nagoya Evaluation

Current Status:

Researcher input required

Notify applicants that ABS review is complete

Once the evaluation is complete,
he can notify Lisa

COUNTRY	PARTY TO NAGOYA?	OWN ABS MEASURES?	COMMENT	DECISION
Mexico	No	Yes	Has national biodiversity authority; ABS requirements case-by-case.	ABS-relevant Last reviewed by Katjana Klages on 01.12.2025
El Salvador	No	No	Nothing in place	Not ABS-relevant Last reviewed by Katjana Klages on 01.12.2025
Ecuador	Yes	Unknown	Ratified in 2017-09-20, party since 2017-09-20	ABS-relevant Last reviewed by Katjana Klages on 01.12.2025

Overall rationale / comments

Although Mexico is not a party to the Nagoya Protocol, the country has its own national ABS regulations for genetic resources. The competent authorities (e.g. CONAPRED, SEMARNAT) decide on a case-by-case basis whether a permit or procedure is required.

El Salvador is not a party to the Nagoya Protocol, nor does it have clear or established national ABS laws for genetic resources.

💡 Submit scope for ABS review

📍 ABS-relevant countries

Mexico	✓ ABS-relevant
Ecuador	✓ ABS-relevant

📍 Countries without ABS obligations

El Salvador	✖ Not ABS-relevant
-------------	---

Overall rationale / comments

Although Mexico is not a party to the Nagoya Protocol, the country has its own national ABS regulations for genetic resources. The competent authorities (e.g. CONABIO, SEMARNAT) decide on a case-by-case basis whether a permit or procedure is required.

El Salvador is not a party to the Nagoya Protocol, nor does it have clear or established national ABS laws for genetic resources.

Ecuador is a party to the Nagoya Protocol and ratified the Protocol in 2017.

This means that genetic resources and certain types of use are generally subject to the country's ABS regime. Regardless of whether additional national laws exist, projects involving Ecuador typically require an assessment of ABS obligations.

ABS process history & quick links

🔍 Scope details

Lisa sees an overview on the current ABS status

- She **can** already submit scope information
- However, it gets more important, once the project is funded:

She will be prompted more forcefully

 ABS Review comment: "Ratified in 2017-09-20, party since 2017-09-20"

> Sample Collection 1

Geographical scope *

Please describe regions, provinces or specific locations where samples were collected in this country.

Pichincha province – Andean cloud forest near Quito (1,800–2,400 m)

Temporal scope *

For example: 2018–2020; March 2023; multiple field trips between 2019 and 2022.

2019-07 to 2019-09

Ongoing / still collecting samples

Material scope *

Which types of samples are concerned? Please select one or more options. If something is missing, add it as a new term and describe details in the notes.

soil samples  rhizosphere isolates 

Utilization scope *

How will the genetic resources be used? Please select one or more options. For other types of use, add your own terms and describe them in the notes.

genome sequencing  metabolite profiling 

 Add Sample Collection

Associated traditional knowledge (aTK)

Associated traditional knowledge (aTK) refers to knowledge, innovation, practices, and technologies developed by Indigenous peoples and local communities (IPLCs) and associated with the genetic resources.

Traditional knowledge is involved for this country.

Sampling sites and target plant species were suggested by members of the Kichwa community based on traditional medicinal knowledge.

Additional notes (optional)

Please indicate any other relevant information on ABS, including explanations for custom materials or utilization types, or ongoing permit processes.

Lisa now adds information to each ABS-relevant country

- She can add multiple sample collections with different scope
- Copy from above and collapsible boxes help her edit many datasets
- She can add information on aTK and some more notes
- She can save any time, come back later and finally submit:

The ABS scope for the project proposal 'Nagoya Project' has been submitted for review.

[View](#)

Daniel

Country review

Review of countries as part of the ABS evaluation process was conducted by: Katjana Klages on 01.12.2025

Nagoya Party: No

Own ABS measures: Yes

ABS-relevant

Comment:

Has national biodiversity authority; ABS requirements case-by-case.

Scope overview

Country review by Katjana Klages on 01.12.2025

SAMPLE COLLECTION 1

Geographical scope:	Yucatán peninsula – agricultural fields and semi-natural shrubland
Temporal scope:	planned from 2026-02 <i>ongoing / planned</i>
Material scope:	rhizosphere soil samples, root-associated bacterial isolates
Utilization scope:	metagenomic sequencing, isolation of antibiotic-producing strains, functional screening for MEP pathway inhibitors

SAMPLE COLLECTION 2

Geographical scope:	Central Mexico – highland maize cultivation systems (collaboration with local research institute)
Temporal scope:	planned from 2026-06 <i>ongoing / planned</i>
Material scope:	bulk soil samples, phyllosphere swabs, enriched actinomycete cultures
Utilization scope:	comparative genomics, secondary metabolite analysis, strain characterisation for potential therapeutic leads

Additional notes:

Samples will be collected in collaboration with the Instituto Nacional de Ecología. The Mexican partner institution will coordinate all ABS-related procedures and submit the permit requests locally. Researchers will receive copies of PIC/MAT once granted.

Daniel can evaluate the country thoroughly

- He has all previously collection information at one place
- He can review one country at a time

Daniel

Country review

Classification for this country (A/B/C) *

- A – in scope of EU Regulation (Nagoya Protocol)
- B – in scope of national ABS measures only
- C – out of scope

Rationale for this country *

Please briefly justify the A/B/C classification for this country (e.g. type of resources, time frame, legal situation).

Ecuador is a Party to the Nagoya Protocol and requires formal access permits for any genetic resources collected in situ. For research involving endophytes, soil microbes or environmental samples, Prior Informed Consent and Mutually Agreed Terms are mandatory. When sampling sites or target species are selected based on traditional knowledge—particularly involving Kichwa or

ABS permits for this country

List any required or already obtained ABS permits. You can use free text names and track the status.

PERMIT NAME	STATUS	COMMENT	
ABS Access Permit (PIC)	Needed		
Mutually Agreed Terms	Needed	Required with aTK	
Proof of Community Consent	Needed	Required with aTK	
Galapagos Research Permit	Needed	Because scope included Galapagos	

+ Add permit

Last evaluation for this country by Katjana Klages on 01.12.2025

 Save ABS evaluation

Daniel can evaluate the country thoroughly

- He can label the country as A, B or C – depending on the scope
- He can add all required permits
